

1. Install the Git

Go Git for Windows website and download the Git official version (currently, Git-2.5.1):

<http://msysgit.github.com/>

Install Git (Choose "Icon on the Desktop" and "Use Git Bash only", otherwise as default)

2. Clone graz folder from the cloud

Click Git icon to run it and check the place on a disk, list all items:

```
pwd
ls -la
```

make a new folder (gitrepo) and step there, and init Git:

```
makedir gitrepo
cd gitrepo
git init
```

Clone graz-repository from SourceForge on your computer anonymously (read-only manages to):

```
git clone git://git.code.sf.net/p/graz/code graz-code
```

Now you have all the material in the folder graz-code.
